

WORK ORDER — Lazy Dog Capital Systemization

Agreed sequence. Work top to bottom. Do not start a later step before the one above it is done.

STEP 1 — FINISH THE WORKFLOW MAP

Stages **05, 07, 09, and 11** have never been reviewed in detail. They still carry the original first-pass content and have not been reconciled against anything decided since.

STAGE	WHAT NEEDS WORK
05 — Capital Partner	The significant gap. No defined trigger for when a CP is brought into a deal, no sequence for the parallel track, no handling for what happens if you commit to a borrower before a partner is lined up.
07 — Closing	Reconcile against the Closing Instructions and the Cleared to Close email. Confirm recording sequence and what returns to the file.
09 — Servicing	Blocked in part by the draw model decision. Covers statements, draws, insurance and tax monitoring, maturity tracking.
11 — Payoff & Release	Payoff statement, release of lien, release of collateral assignment, CP final accounting, closed-file sign-off.

Done when: every stage has been walked, and the document list at each one matches decisions made elsewhere in the map.

STEP 2 — SETTLE THE OPEN DECISIONS WITH STEVE

#	DECISION	BLOCKS
1	Draw model — reimbursement vs. initial draw. The most consequential open item.	Welcome/Servicing Letter · Draw Inspection Report · draw schedule · Note and Deed of Trust draw provisions · stage 09 · the entire draws data model
2	Draw schedule — fixed milestones with set release amounts, or ad hoc against completed line items	Same as above
3	Conditional Approval expiration window — 30, 45, or 60 days	Conditional Approval · both approval emails

4	Signature convention — single Manager on administrative documents, both on anything creating an obligation?	Loan Proposal · Conditional Approval · closing and workout packets
5	Online application output — does it produce a signed PDF, or only a record? The credit authorization signature is the piece that matters.	Loan Application · stage 02 · FCRA compliance

Settled since: draw model, Conditional Approval expiration (30 days), signature convention, and payments. Lazy Dog does not auto-draft — the "ACH Authorization" becomes **Payment Instructions** with no debit authority.

Done when: all five are decided and recorded in the workflow map.

STEP 3 — BUILD THE REMAINING DOCUMENTS

16 outstanding. Two are blocked by the draw model decision and are marked below.

#	DOCUMENT	NOTES
1	Deal Underwriting Worksheet	Highest leverage — enforces 80% ARV / 10% down / holdback math, feeds the Closing Worksheet
2	Welcome / Servicing Letter to borrower	Blocked — draw model
3	Renewal & Extension Agreement	Papers the 3-month extension
4	Wire instructions letter — Capital Partner	
5	Draw Inspection Report	Blocked — draw model
6	Contractor Lien Waiver — conditional + unconditional	
7	Maturity Reminder Letter — 60 / 30 days out	
8	Release of Collateral Assignment	
9	Capital Partner final payoff statement	
11	Notice of Acceleration	
12	Capital Partner default notification letter	
13	Itemized Total Debt statement (workout)	
14	Capital Partner written consent to accept a deed in lieu	
15	Capital Partner notice of completed conveyance	
16	True-up summary statement · credit bid worksheet · post-sale CP accounting	Foreclosure and workout support

Running in parallel — regeneration pass. 10 existing documents need updating for decisions already made: Loan Proposal rename, 9-month term, 3-month extension at 1% of

original principal, \$120 background check fee, actual/360 basis language, credit authorization removal from the application. Requires Lazy_Dog_Merge_Masters.zip and the fillable PDFs.

Also outstanding — attorney review. 8 documents in the deed-in-lieu workout packet await Texas real estate attorney sign-off. Standing gate: securities-attorney review of collateral-assignment mechanics before any CP document reaches an investor.

Done when: every document exists, the regeneration pass is complete, and the attorney has signed off on the workout packet.

STEP 4 — DESIGN THE DATA MODEL, THEN PICK THE TOOL

Only after Steps 1-3. The design work is mostly already done and sitting in the workflow map — this step is translation, not discovery.

Tables the workflow implies: loans · borrowers · guarantors · properties · draws · payments · capital partners · CP participations · conditions · documents · notices.

Tool decision, made at that point and not before:

OPTION	FITS IF
Airtable	Visual interface Lewis can repair himself, no SQL, built-in forms and automations. Likely the right answer at 4-10 loans.
Supabase	Only if building a real application on top — borrower portal, capital partner dashboard. More control, more maintenance, and Lewis doesn't use it much today.
Purpose-built platform	Mortgage Automator, Liquid Logics, The Mortgage Office. Ruled out on cost at ~\$300+/month. Revisit above ~25 concurrent loans.

Automation glue: Make.com (\$9-16/mo) or n8n self-hosted. Already owned: Docusign, Gmail, Google Drive, QuickBooks, Todoist, Quo.

First thing to automate — the statement engine. Daily accrual on a moving balance, borrowers at actual/360 and capital partners at actual/365, every month, for every loan. Everything else in the process is periodic; statements are the treadmill, and a single error compounds across a partner relationship.

Then: document generation from tokens → date triggers (maturity, insurance, taxes) → Docusign and pipeline tracking.

SETTLED — DO NOT REOPEN

- **Interest:** borrower actual/360, capital partner actual/365. Funding day counts, payoff day does not. 12.000% nominal = 12.167% effective on the borrower side.
- **Term:** 9 months, one 3-month extension at 1% of original principal, automatic on payment but unavailable if a default exists.
- **Fees:** origination 2 points · admin \$499 · background check \$120 flat · draw \$199 each · late charge 4% after the 10th day · default rate 18%.

- **No prepaid interest collected at closing.** Interest accrues on funds actually advanced.
- **Deed in lieu** is a post-default workout offer only. Nothing signed at closing. No equity waiver. Foreclosure is the default path.
- **ARV determined in house.** Never appears in borrower-facing documents.
- **Borrower's interest rate never appears in any investor-facing material**, and the Promissory Note is not enclosed with capital partner correspondence.
